DESCRIPTORS: *Petroleum, *Water, *Rock.

The process of petroleum displacement by water from
stratified porous rocks was investigated on transparent
models of dilayer and trilayer strata. A leveling of
surface form on water-petroleum contact occurs in strat-
ified porous media, even at essential difference in layers
permeability. The leveling occurs on account of water
passage into a little permeable layer near displace-
ment front. In its turn, a significant part of displaced
phase passes from a less permeable layer into a more

VISCOSITY OF MOLTEN SALTS. [1963] [11p] 11 refs
Order from SLA \$1.60 TT-63-20461

Trans. of Nihon Kinzoku Gakkai-Shi (Japan) 1950,
v. 14B, no. 2, p. 49-52. (Abstract available)

DESCRIPTORS: *Salts, Melting, *Viscosity,
Halides, Carbonates, Nitrates, Mixtures, Viscosimeters.

The viscosity coefficients of molten salts were determined with an apparatus consisting of a nickel ball suspended from a chemical balance. The viscosity coefficients obtained for H_2O , KNO_3 , and $NaCl$ showed excellent agreement with published data. The viscosity coefficients of KCl , $NaCl$, $NaNO_3$, KNO_3 , mixtures of KCl and $NaCl$, and mixtures of $NaNO_3$ and KNO_3 were determined at various temperatures. At a given temperature, the viscosity was minimum for a binary mixture containing the salts in 1:1 molecular ratios. (Author)
